There's Plenty of Room at the Bottom

Richard P. Feynman

Caltech, APS Meeting
26 de Diciembre de 1959

What I want to talk about is the problem of manipulating and controlling things on a small scale.

And I want to offer another prize—if I can figure out how to phrase it so that I don't get into a mess of arguments about definitions—of another $1000 to the first guy who makes an operating electric motor—a rotating electric motor which can be controlled from the outside and, not counting the lead-in wires, is only 1/64 inch cube.

I do not expect that such prizes will have to wait very long for claimants.[1]

¿Cuánto se desplaza un bimorfo?
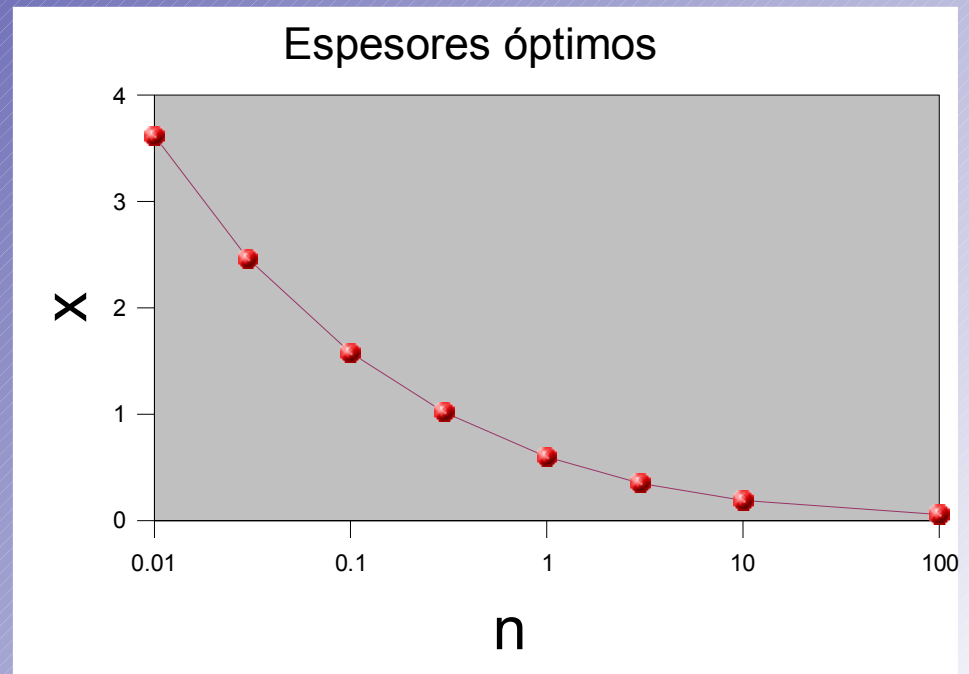

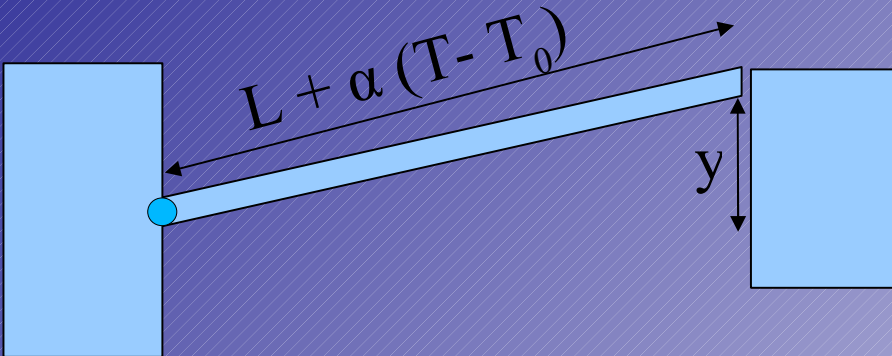

$$\Delta y = \frac{3 L^2}{8 t_{bi}} \frac{8(1+x)}{(1/x + 4 + 6x + 4x^2 + n x^3)} (\alpha_{bi} - \alpha_{subs})(T - T_0)$$

$$x = \frac{t_{subs}}{t_{bi}} ; n = \frac{E_{subs}}{E_{bi}}$$

Espesores óptimos

Una estructura más simple:

$$y = L \sqrt{\left(\alpha (T - T_0) \left[1 + \alpha \frac{(T - T_0)}{4} \right] \right)}$$
$$\alpha \simeq 10^{-6} \, K^{-1}$$
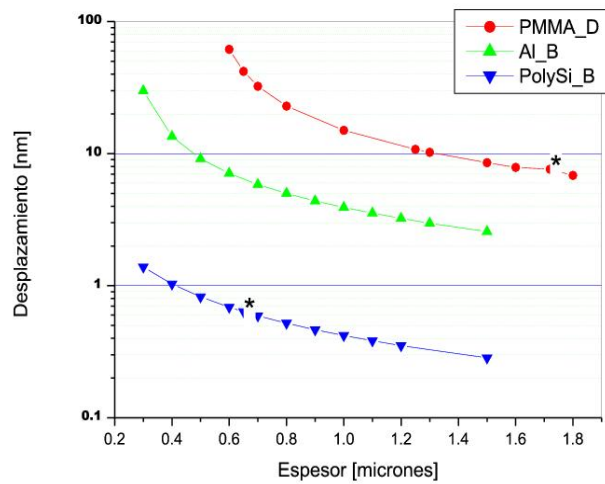

$$y \simeq L \sqrt{\alpha (T - T_0)}$$
